

AVAHosted

VoIP Turn-key Solution as a Service

AVAHosted is our carrier-grade VoIP turn-key solution AVAVoIP as a service (SaaS) at an affordable monthly cost, with immediate implementation, and without any deployment risks. It is available both as a Cloud Solution (on our servers, in our data center) and as an On-premise Solution (on customer servers, in customer data center).

Key advantages

Save you money

You do not have to make big investments in order to start/run your VoIP Business.

Save you time

You can start/scale up your business immediately without any delays for implementation, integration, and deployment.

Minimize your risks

It allows a quick exit strategy without the associated risks of losses on sale of equipment or write-off of assets.

Increase your flexibility

You can scale up the capacity easily and without any delay or losses.

Create competitive advantage

With our robust routing, billing, and reporting utilities you will be able to better serve your customers and beat your competitor.

Make your life easier

Our intuitive interface and comprehensive features makes the using of the system easy and pleasant and minimizes the stress of your everyday work.

Key features

Web based Management

AVAHosted has a user-friendly web interface for control and management of billing, rating, accounts and routing. You can easily find all necessary tools for implementing a large number of VoIP services. The platform can effectively organize and manage accounts and the relevant subscription plans.

Unlimited Subscription Plans

AVAHosted can support multiple tariffs, taxes, custom charges and usage counters associated in a subscription plan which can be then assigned to many user accounts.

Flexible Billing Functionality

AVAHosted supports both pre-paid and post-paid billing functionality where you can setup credit balance for both type of users, credit limit for the post-paid users only and minimum balance needed for pre-paid users to make a call.

Multiple Authentication Methods

AVAHosted can authenticate users by their IP address, Tech prefix, Digest Authentication or a combination of those methods.

Real-time Reporting

AVAHosted provides real-time reporting of all critical information about the business activities managed by the system. The product provides reports such as: Revenue Assurance Reports, Call History Reports and Configuration Audit Reports.

Multiple Call Billing Methods

AVAHosted offers both traditional call billing methods such as Initial Interval, Connect Fee and Disconnect Surcharge, as well as advanced billing methods, such as Peak/Off-peak, inbound and outbound On-Net calls, calls to DID's and TollFree Numbers.

Comprehensive Routing

AVAHosted provides a powerful tool for managing VoIP routes to termination providers. The functionality is used to determine service costs and to provision VoIP switching equipment from multiple vendors. You can group multiple routes from various providers and allow comprehensive route prioritization mechanisms based on longest match, priority, cost, quality.
