39270949	2013-02-07 14:45:12.459	crontab.dw_cnnv	INFO	PROCFSS (2101) FINISHFD	13534

The data table gives detailed information organized in the following columns:

- ID – sequential number of each process in the report
- Timestamp – date and time of the process
- Logger – name of the process
- Level – type of the log (INFO,DEBUG,WARNING,ERROR)
- Message – status of the process, including details about the warning/error
- Thread – system number of the process
- Line – line in the process on which this message appeared

The filtering functionality allows you to extract any necessary information about the system logs – also, all columns can be sorted as needed.
